Brilliant Careers for STEM students in the South West: Dorset Software

Employees:

50 - 100

Location:

Poole

Industry:

Software development

What does Dorset Software do?

As the name suggests, Dorset Software do everything software. This could mean building bespoke software or understanding and editing existing software. On a daily basis programmers at Dorset Software might be writing C# code, testing software, or setting up cloud computing systems to host software.

What do you need to work at Dorset Software?

Dorset Software recruit people from various STEM backgrounds to work as developers, so a lot of their staff have studied maths or physics. They told us that new employees might have no experience coding but learn quickly, because STEM degree subjects give you a lot of the skills that make a good developer—like problem solving and analytical skills.

Three key questions:

· How do you handle working on several different client projects at once?

· How do you learn to write software for a broad range of applications?

· What makes a good piece of coding?
